

Strong earthquake shakes western Turkey and Samos island

secty lifePatron-System gives an alarm 8 seconds in advance!

While everyone was waiting for the "strong earthquake in Istanbul", the earthquake in Izmir came painfully. The earthquake is an inevitable natural disaster, but as we always say, it's up to us to take precautions.

We remember all citizens who lost their lives in the earthquake of magnitude Judge 6.9 on October 30, 2020 in Izmir / Turkey, and we wish their relatives our condolences.

The photos belong to this system in the building where our system gave an early warning "P-wave" (primary) of 8 SECONDS before the "S-wave" (destructive) reached the building.
