secty system

Mr Przybylak,

we have installed your earthquake detection system „secty“ in our Total Building Solution Lab in Zug/Switzerland some weeks ago. The interfaces to our Building Management System DESIGO were easily realized and the commissioning could be finished without problems. We are providing now some new applications which are reacting to earthquake alarms. The simulation are running well, but we have had –up to now- no real alarm. We hope to stay with the simulation even if a real alarm would be interesting.

Some construction works close to lab were detected but no false alarm was triggered.

best regards,

Wolfgang Hass
