Mr.

Jürgen Przybzlak

Sectyelectronics GmbH

REFERENCE LETTER

Dear Mr. Przybzlak,

Since the initial installation of the "secty lifePatron" earthquake early warning system at the German School "Max Uhle" in Arequipa, Peru, about which we issued you a reference letter on 24.03.14, we can report to date that we have not recorded any false alarms during this period. Even in the case of smaller earthquakes/intensities, the population alarm system has not raised an alarm. This confirms the high level of reliability that your system offers. In the meantime, teachers, parents and students have achieved a very high level of trust. Classrooms and other school facilities are only left when the siren sounds.

Due to the continuous and error-free operation, we have now carried out an UPDATE to our system and also had a maintenance switch installed. Further indoor sirens are now also being installed.

In addition, test alarms are carried out several times a year.

The main features of the system remain important:

- Redundant monitoring by two spatially separated earthquake detectors, which only trigger an alarm if the limit is exceeded at the same time
- Automatic permanent monitoring of the sensors
- Easy operation and handling of the system
- No high maintenance and service costs
- Simple possibility to carry out test alarms
- Good training and support from sectyelectronics GmbH

We would like to thank you for your excellent cooperation, outstanding customer service and ongoing commitment to the improvement of our earthquake prevention system.

We look forward to your continued excellent cooperation, possible system upgrades and maintenance, and ongoing advice.

Yours sincerely

Benedikt Schürholz
