Mr. Juergen Przybylak
Borghagener Str. 145
44 581 Castrop-Rauxel

Dear Mr. Przybylak

I am pleased to confirm that during the European earthquake research project SAFER (2006-2009) devices of the "secty lifePatron" were installed in the Institute of Geodynamics with the purpose of testing. Initially multiple test alarms were successfully carried out in laboratory conditions.

After this trial period the device was permanently installed from 31 March 2009 up to now with the aim to test it in real earthquake shaking. I am able to confirm that no false alarms were noted so far. In addition, our collaboration with secty electronics GmbH has been absolutely satisfactory.

I am looking forward to further collaboration.

Sincerely yours,

Dr Gerassimos A. Papadopoulos

Research Director
